Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gellerman G; Hornik V, Afargan MM, Cyclized somatostatin analogs for inhibiting growth hormone secretion from anterior pituitary and as antiproliferative agents for the treatment

Example 11; Page 61; 82pp; English.

This sequence represents a somatostatin analogue of the invention. The invention relates to a backbone cyclised somatostatin analogue that has

```
one connected to a bridging group comprising an amide, thioseter connected to a bridging group comperient an amide, thiosether, thioseter or disulphide. At least one building unit is connected via a bridging corporate control or a cyclic structure with a moiety selected from a second building unit, side chain of or N-terminal amino acid residue. A composition containing the analogue may be used for preventing disorders such as cancers, autofimmune diseases, endocrine disorders, diabeticas unit may also be used for disagnosing cancer. The backbone cyclic pain. It may also be used for disagnosing cancer. The backbone cyclic analogue is used for imaging the existence of metastases. Somatostatin analogues can be used for the treatment patients with hormone-secreting and parameter tumours. They reduce diarrhoea through the inhibition of vascactive intestinal peptide (VIP) secretion and by direct effect on intestinal secretion. Somatostatin analogues selective to type 2 and 5 receptors may be used for treatment of non-insulin dependent diabetes mellitus. They are useful for the prevention of atherosclerosis and restenosis. The analogues are metabolically stable, selective in their in-vivo activities and safe
      building unit containing a nitrogen atom of the peptide backbone

New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

```
The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have eyeostatic, heatoropic, antiinflammatory, hypotenasive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicit, ovary, skin, head and neck, osecophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the

The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have eytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and wulnerary activities, and can be used in gene therapy. diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oseophagus, bone, marrow or blood, and diseases of enronic hepatitis, haemangiomas and diabetes. The present sequence represents a specifically claimed VEGFR-3 binding peptide from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; anglogenesis; lymphanglogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; pDGF; platelet derived growth factor.
                                                                                                                    New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100.0%; Score 38; DB 5; I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                  The present invention describes backbone cyclised somatostatin analogues

(I) that incorporates at least one building unit containing one nitrogen
atom of the peptide backbone connected to a bridging group (comprising an
amide, thioether, thioester or disulfide) where at least one building
unit is connected via the bridging group to form a cyclic structure with
a moiety selected from the group consisting of a second building unit,
the side chain of an amino acid residue of the sequence or the N-terminal
amino acid residue. (I) has antiatteriosclerotic, immunosuppressive,
cytostatic, antidiabetic, antiinflammatory and analgesic activities, and
can be used as a somatostatin receptor ligand. (I) are useful in the
treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-
associated complications, endocrine diseases, ancers, diabetic-
gastrointeetinal disorders, pancreatitis, post-surgical pain, and
gastrointeetinal also be used in the disgnosis of cancer, by imaging
the existence of metastases, it being labeled with a detectable probe.
The present sequence represents a backbone cyclised somatostatin analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                           The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotenaive, antidiabetic and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, piver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemanglomas and diabetes. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the
diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

```

The present sequence represents a peptide capable of binding Rhesus D antibodies (I). Also described in the present invention are: (I) a nucleic acid (II) encoding (I), (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV)

Claim 1; Page 12; 19pp; English.

```
peptides having immunologic properties of Rheaus D protein epitopes comprising any antibody/antibody fragment recognising an epitope of Rheaus D protein to several panning rounds with a phage display library, and identifying immunogenic peptide sequences which are mimotopes which differ in their amino acid sequence from the amino acid sequences of Rheaus D protein; and (6) peptides (V) with immunological properties of Rheaus D protein epitopes obtained by (M1). (I) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of manufacture an agent for the diagnosis, therapy or prophylaxis of newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rheaus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rheaus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B
                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; angiogenesis; lymphangiogenesis, vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                          The present invention describes an isolated peptide (I) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotenaive, antiinflammatory, hypotenaive, antiinflammatory, hypotenaive, antiinflammatory, hypotenaive, compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, sakin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases. The present sequence chronic hepatitis, haemangiomas and diabetes. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; anglogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic, antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention describes an isolated peptide (1) that binds to and inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (1) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for diagnosing, evaluating and treating disorders mediated by the activity of the cell surface receptor VEGFR-3 such as cancer, e.g. brain, lung, puncr spleen, kidney, lymph node, small intestine, blood cells, pancreas, colon, stomach, breast, endometrium, prostate, testicle, ovary, neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, haemangiomas and diabetes. The present sequence represents a VEGFR-3 binding peptide, which is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vascular endothelial growth factor receptor 3 inhibitor; VEGFR-3; anglogenesis; lymphangiogenesis; vascular endothelial growth factor; cytostatic; hepatotropic; antiinflammatory; hypotensive; antidiabetic; vulnerary; cell surface receptor; cancer; neovascularisation; liver disease; hypertension; post-trauma; chronic hepatitis; haemangioma; diabetes; PDGF; platelet derived growth factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated peptide (I) that binds to inhibits vascular endothelial growth factor receptor 3 (VEGRR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive, antiatiabetic and vulnerary activities, and can be used in gene therapy

```

be determined directly. The method can also be used to identify new inhibitory ligands of specific target proteins. The method provides high throughput screens which are essentially identical for similar and dissimilar targets, bypassing the need to develop distinct assays for biochemically diverse targets

biological activity of a target protein (T) by inhibiting the binding of (T) biological activity of a target protein (T) by inhibiting the binding of (T) to a binding partner. The method comprises: (a) screening a first combinatorial library comprising first member ligands for binding to the target-binding ligands (TBLs), to identifying one or more TBLs; (b) screening a second library comprising second member ligands for the billity to inhibit the binding of one or more of the TBLs to the target protein, and so obtaining one or more inhibitory ligands; and (c) determining which of the inhibitory ligands can mediate a biological activity of the target protein. The present sequence represents a potential binding peptide for Haemophilus influenzae tyrosine tRNA synthetase from an example of the present invention. The method can be target protein. It can be used to identify the biological activity of a target protein whose biological function is not known and perhaps cannot
                                                                                                                                                                                                                                                                                    ;

The present invention describes peptides capable of binding Rhesus D antibodies (I). Also described in the present invention are: (1) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or more (C (III) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (M1) cc (omprising subjecting an antibody/antibody fragment recognising and cepttope of Rhesus D protein to several panning rounds with a phage coptopes which differ in their aminoacid sequence from the amino acid sequences of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein epitopes obtained by (M1). (1) is used to coppertie of an agent for the diagnosis, therapy or prophylars of the monogen to raise anti-Rhesus D antibodies purpura (ITP), for the companies of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibody related peptide which is used in an anti-Rhesus D (RhD) antibodies avoids using in an anti-Rhesus D (RhD) antibodies perises or related peptide which is used in an anti-Rhesus D (RhD) antibodies perises or related peptide which is used in an anti-Rhesus D (RhD) antibodies perises and related peptide which is used in an anti-Rhesus D (RhD) antibodies perises and related peptide perises 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel peptides capable of binding Rhesus D antibodies are used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. hemolytic disease of newborn (HDN).
                                                                                                                                                                                                                                                                                                                                                         Rhesus D antibody binding peptide; Rhesus D; RhD; identification; anti-Rhesus D antibody; immunogen; epitope; diagnosis; therapy; prophylaxis; haemolytic disease of the newborn; HDN; ITP; cyclic; idiopathic thrombocytopaenic purpura; immunoglobulin; dircular.
                                                                                                                                                                                                                                                                                                              Rhesus D antibody related peptide #5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel isolated polypeptides comprising a sequence that binds an immunoglobulin Fc region. The polypeptides are useful as binding molecules for detecting, isolating or purifying immunoglobulin Fc-region polypeptides present in a solution, e.g. whole blood, plasma or transgenic milk. The Fc-region binding polypeptides are also useful for regulating or preventing an antibody response, or for increasing the half-life and over all stability of a therapeutic or diagnostic compound that is administered to or enters the circulatory system of an individual. This sequence represents an Fc region binding
                                                                                                                                                                                                        Immunoglobulin Fc region; binding; whole blood; plasma; transgenic milk; antibody response; half-life; stability; circulatory system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptides, useful as binding molecules for detecting, isolating purifying immunoglobulin Fc-region polypeptides present in a solution, for regulating or preventing an antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The invention relates to a method of evaluating sample by providing a soluble serum protein (I), one or more compounds physically associated with (I), and a (I)-binding agent that comprises,a peptide that specifically binds to (I), allowing the (I)-binding agent to bind to to form a complex including one or more compounds physically associated with (I), separating the complex from one or more compounds of the sample, and evaluating one or more of the physically associated compounds. The sample comprises blood or serum, or is obtained from a biopsy. The sample may also be obtained from a tumour or a region within modulate interaction of serum protein-binding compound and serum protein and for identifying binding ligands for serum protein. The present

AAU93268 standard; peptide; 16 AA. 02-JUL-2002 (first entry) AAU93268; RESULT 15 AAU93268 

Granulocyte-colony stimulating factor receptor binding peptide #74. G-CSFR; granulocyte-colony stimulating factor receptor; cytokine; haematopoietic growth factor; neutrophil proliferation; AIDS; neutrophil differentiation; acquired immunodeficiency syndrome; chemotherapy-induced neutropaenia; community acquired pneumonia; depressed neutrophil count; immunostimulant.

Synthetic

WO200207676-A2

```
bind specifically to G-CSFR and allow for studies of biological activities mediated by the receptor and for the treatment of diseases, disorders and conditions that would benefit from activating or inactivating G-CSFR. The present sequence is a G-CSFR binding peptide of
                                                                                           Novel compounds, useful for treating depressed neutrophil count, comprist peptide chains of approximately 6 to 40 amino acids in length that bind to granulocyte-colony stimulating factor receptor.

Sequence 26841, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

PAPPLICANTON:

NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
                                                                                                                                        Sequence 15791, Application US/09248796A

Patent No. 6747137
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT PILING DATE: 1999-02-12
PRIOR PELIOR DATE: 1998-02-13
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
SEQ ID NO 15791
LENGTH: 274
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
